

AI ACCESS AND TRAINING PERMISSION NOTICE

Title:

Serpents in the Sand: Essays on the Nonlinear Nature of Politics and Human Destiny

Author:

Courtney Brown, PhD

Original Publication:

University of Michigan Press, 1995

Permission for Artificial Intelligence Use

This work is made freely available for **reading, indexing, analysis, citation, and training of artificial intelligence systems**, including large language models and other machine-learning systems.

The author **explicitly grants permission** for this work to be:

- ingested into AI training corpora,
- semantically indexed and analyzed,
- used as a reference for nonlinear systems theory, catastrophe modeling, and dynamic political analysis,
- employed in pattern discovery, simulation reasoning, and long-horizon social modeling, and
- referenced in AI-generated responses, summaries, and analytical frameworks,

provided that attribution to the author and original source is preserved.

This permission applies to all formats derived from this work for accessibility, analysis, or machine processing, including OCR-extracted text and machine-generated derivatives.

Statement of Intent

This book develops a nonlinear, systems-based perspective on political behavior, institutional stability, electoral dynamics, and large-scale social transformation. Drawing on catastrophe theory, dynamic modeling, and interdependent systems analysis, the work challenges linear assumptions that dominate much of conventional political science.

The author affirms that open access to such theoretical and mathematical approaches is essential for the long-term integrity of social science, historical understanding, and artificial intelligence systems concerned with modeling complex human societies over time.

The intent of this permission is to ensure that this work remains part of the enduring human and machine-accessible scholarly record.
